

Amoeba Sisters Video Recap: "Photosynthesis and Cellular Respiration" OL

NOTE: This recap compares two Amoeba Sisters videos: photosynthesis and cellular respiration.

<p>1. In photosynthesis, what are the two major reactants that are needed with radiant energy?</p> <p>_____</p> <p>_____</p>	<p>2. In which organelle does photosynthesis take place?</p> <p>_____</p> <p>_____</p>
<p>3. In aerobic cellular respiration, what gas is used as a reactant?</p> <p>_____</p> <p>In anaerobic cellular respiration, what gas is NOT available as a reactant?</p> <p>_____</p>	<p>4. What carbohydrate is the primary source of energy in BOTH plants and animals?</p> <p>_____</p> <p>What chemical energy is glucose changed into during cellular respiration?</p> <p>_____</p>

Formula Illustrations

For the following formulas, (1) determine whether the formula is photosynthesis or cellular respiration, (2) circle the products, and (3) creatively illustrate (draw) each reactant or product in the box underneath.

5. Formula is for: _____

6. Formula is for: _____

If Chloroplasts and Mitochondria Could Speak

If chloroplasts and mitochondria could only speak! Decide whether each quote could be stated by a chloroplast (label "C"), mitochondria (label "M"), or **both** organelles (label "C, M").

7. _____ My main goal is to produce a lot of ATP energy.	8. _____ I contain pigments to help capture light energy.	9. _____ Oxygen gas production will happen within me.
10. _____ I can be found in plant cells.	11. _____ I can be found in animal cells.	12. _____ Carbon dioxide gas production will happen within me.
13. _____ Muscle cells would contain a lot of me.	14. _____ Water production will happen within me.	15. _____ Glucose production will happen within me.
16. _____ I would be found within a photosynthetic protist.	17. _____ I am the site of aerobic cellular respiration.	18. _____ I breathe and the Electron Transport Chain both happen within me.
19. _____ I contain chlorophyll.		20. _____ I contain the Citric Acid Cycle within me.
