

Name: _____ Date: _____ Period: _____

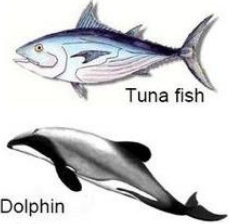

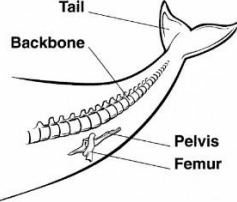

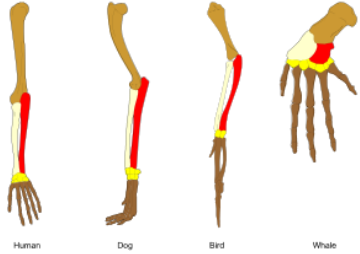

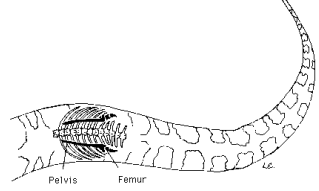

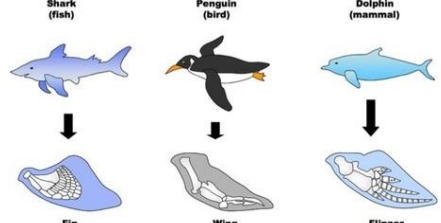

Using Anatomical Structures to Show Common Ancestry

The study of comparative anatomy provides evidence for evolution. After completing the lab, Define the following terms and use your knowledge to identify the following structures.

Homologous structures –

Analogous structures –

Vestigial structures –

	Homologous	Analogous	Vestigial
 <p style="text-align: center;">Tuna fish Dolphin</p>			
 <p style="text-align: center;">Tail Backbone Pelvis Femur</p>			
 <p style="text-align: center;">Human Dog Bird Whale</p>			
 <p style="text-align: center;">Pelvis Femur</p>			
			
 <p style="text-align: center;">Shark (fish) Penguin (bird) Dolphin (mammal)</p> <p style="text-align: center;">Fin Wing Flipper</p>			

	Homologous	Analogous	Vestigial
<p>External surface Skeletal structure</p> <p>Reduced hind legs</p>			
<p>Hedgehog (mammal) Cactus (plant)</p> <p>Sea urchin (invertebrate)</p>			
<p>Normal tonsils</p> <p>Soft palate</p> <p>Tongue</p> <p>tonsils</p>			
<p>Whale Frog Horse Lion Human Bat Bird</p>			
<p>Upper impacted wisdom tooth</p> <p>Lower impacted wisdom tooth</p>			
<p>Panda Chimpanzee Human Gorilla</p>			

Which type of structure are evidence of a common ancestor? _____
